

## API Testing Assignment:

Following API needs to run successfully in the Postman collection runner -

<https://simple-books-api.glitch.me>

Endpoints :

### 1. GET /status

Returns the status of the API.

### 2. GET /books

Returns a list of books.

### 3. GET /books/:bookId

Retrieve detailed information about a book.

### 4. POST /orders

Allows you to submit a new order. Requires authentication.

The request body needs to be in JSON format and include the following properties:

- bookId - Integer - Required
- customerName - String - Required

The response body will contain the order Id.

### 5. GET /orders

Allows you to view all orders. Requires authentication.

### 6. GET /orders/:orderId

Allows you to view an existing order. Requires authentication.

### 7. PATCH /orders/:orderId

Update an existing order. Requires authentication.

### 8. DELETE /orders/:orderId

Delete an existing order. Requires authentication.

### 9. POST /api-clients/

To submit or view an order, you need to register your API client.

The request body needs to be in JSON format and include the following properties:

- clientName - String
- clientEmail - String

The response body will contain the access token. The access token is valid for 7 days.
